## **JULY 2024 MONTHLY REPORT**

*The image above features Super Tusker BA1 alongside another bull elephant in a Tsavo dry riverbed. Elephants often dig small wells into the sand, like the one shown here, to access water during the dry season. These elephant-dug wells also benefit other wildlife. Inspired by this natural behavior, Tsavo Trust and its partners have constructed 13 sand dams in the Tsavo's to store water during rainy seasons, making it available for wildlife during the dry season. ## Unusual Photo of the Month:

*The photo above features one of two cheetahs spotted during an aerial patrol. Cheetahs are hard to come by in our landscape, especially in Tsavo West National Park, which is known for its dense vegetation. This sighting occurred in the southern sector of Tsavo West, near Lake Jipe, where the vegetation is relatively open.*
